

MongoDB Windows Installation Guide:

1 Download MongoDB Community Server

<http://www.mongodb.com/download-center>

2 Click on “Community Server”

3 Click “Download”

4 After downloading - Open MongoDB

5 Run through the installation process

6 Accept the terms

7 Select Complete edition

8 **Select check box to install MongoDB Compass**

9 Click “next”

10 Click “Install”

Once the installation is complete

Go to your Local Disk (C:)

1 In the local disk (C:) right click and create a new folder name “data”

2 Then inside of data, create a new folder name “db”

3 Your PC > Local Disk (C:) > data > db

1 Open command prompt

2 enter / type: **mongo --version**

You will then see the MongoDB shell version

3 **CLEAR** screen

4 To load server enter / type: **mongod**

5 Open a new command prompt window enter / type: mongo - -host local:27017

Congrats you have now successfully installed MongoDB
